## Computer Conservation Society The Tony Sale Award 2016 for Computer Conservation

The purpose of the Tony Sale Award is to recognise a singular engineering achievement in the area of computer conservation and restoration by a person or group, and to give public recognition to such work worldwide. The emphasis is on highlighting a significant practical project, which may involve hardware and/or software.

Nominations are invited by means of the Tony Sale Award 2016 Entry Form, with a deadline of 30 June 2016.

Assessment and Judging will take place during July/August, with the winner being announced at a meeting of the Computer Conservation Society on the afternoon of Thursday 17 November 2016. The Judging Panel for the 2016 Award will be chaired by Professor Martin Campbell-Kelly.

### **Assessment and Judging Criteria**

The following criteria will help the judges in their assessment of the projects:

- Originality: To what extent does the project demonstrate a novel approach to conservation or reconstruction?
- Completeness: Has the project achieved the initial goals set?
- Ingenuity: What new techniques or processes were developed during the project?
- Impact: What contribution has the work made to increasing the understanding of the history of computing?
- Outreach: Is the result of the work visible to experts in the field and/or to the general public?
- Publicity: To what extent has the work already been publicised or written up?

The Judging Panel reserves the right not to make an award.

### **The Award**

The Award comprises a trophy and the sum of £1,000 to be put towards the winning project. The winner will be expected to attend the meeting on 17 November to accept the Award, and give a presentation on the project, for which reasonable expenses for travel and accommodation will be paid.

### **Previous winners:**

David Link for 'Loveletters' *Loveletters* — [www.alpha60.de](http://www.alpha60.de).

Dag Spicer of The Computer History Museum, California for 'The IBM 1401 experience: Restoration and Demonstration Lab'— [www.computerhistory.org](http://www.computerhistory.org).

Raul Rojas for 'Architecture and Simulation of the Z1 Computer' at the Frei Universitat, Berlin — [dcis.inf.fu-berlin.de/rojas](http://dcis.inf.fu-berlin.de/rojas) [www.fu-berlin.de/en](http://www.fu-berlin.de/en).
